

Clump Weights

These solid concrete clump weights are used within the cable-laying operations, typically within route clearance operations. Available in both 60kg and 90kg variants, the clump weights are manufactured in-house and are uniquely designed to be stackable, helping to save storage space.

Features:

- Solid concrete design
- Can be stacked, saving storage space
- Metal loop attachment allows for easy rigging
- Metal loop, batch load tested to 2 x self-weight

Applications:

- Commonly used in cable laying operations to provide tension and stability to cables.
- Used to tie back cut OOS (Out of Service) cables during route clearance operations.
- Holding of subsea objects.
